**DETAILED ACTION**

1. This is in response to the RCE filed on 17 March 2009.
2. Claims 6-8, 10-17 and 19-25 are pending in the application.
3. Claims 6-8, 10-17 and 19-25 have been allowed.
4. Claims 1-5, 9 and 18 have been cancelled.

***Continued Examination Under 37 CFR 1.114***

5. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 17 March 2009 has been entered.

***Allowable Subject Matter***

6. Claims 6-8, 10-17 and 19-25 are allowed.

The following is an examiner's statement of reasons for allowance:

The current application is directed towards establishing a secure network channel between two or more devices in a communication network are disclosed. In exemplary implementations the network may be a UPnP network. A first device passes authentication information to at least a second device to permit the second device to authenticate the first device. Optionally, the first device may request to authenticate the second device, in which authentication information associated with the second device is passed to the first device. The first device uses this information to authenticate the second device. At least one of the first and second device may store authentication information in a data store associated with the device.

The closest prior art to the current application is Jonker et al US 2006/0020784 A1 (hereinafter Jonker). Jonker is directed towards a method, a system and a central device for secure content distribution among devices in a network. The invention is based on the idea that an authorized domain is set up with a central device administering the network. When a device enters the network, the central device registers the entering device and issues at least one certificate to the entering device. The registration to ensure that the entering device is an authorized device, meaning that an authorized device manufacturer has provided the device. Due to network security, non-authorized devices are not accepted in the network. Content is distributed among the devices in the network based on authentication by means of the at least one certificate issued to each device. The distribution of content from a first device to a second device is enabled by the first device authenticating the second device, by means of the at least one certificate of the second device and vice versa.

However, there are differences between the current application and the Jonker reference. Jonker relates to a method and system for secure content distribution among devices in a network. See paragraph [0001] of Jonker. Jonker relates to a conditional access system for content which is typically known as Digital Rights Management (DRM) systems. To accomplish a more secure DRM, Jonker discloses a Device Architecture in which Authorized Domains (ADs) are set up. An Authorized Domain Manager (ADM) participates in the check in of other devices and administers the AD. See, for example, paragraphs [0053] and [0059] of Jonker. A device manager manages all the security objects while a rights manager manages transfer rights. See paragraphs [0073] and [0076-0079] of Jonker. However, none of this disclosure has anything to do with the claimed secure method of adding of a device to an UPnP network by

invoking by using an UPnP application programming interface (API), at the control point, a first authentication process to authenticate the device with the control point. See, for example, figure 5 and its description in the present application which discloses that the secure channel is requested and implemented as part of adding a device to an UPnP network through a protocol stack invoked using an UPnP API. There is no disclosure of this recited feature in Jonker.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
